# AI applied to Language Processing

## PANGEA MASKER

The Pangea Masker uses **AI to automatically identify personally identifiable information (PII)** and replace sensitive data using different types of anonymization. These data anonymization processes are designed to mitigate the ability to trace data or electronic trails that would lead to data misuse or reveal personal details.

### 4 TYPES OF DATA MASKING:

- **ID Tags** replace data with a data tag.
- **Substitution** replaces data with a temporary identifier.
- **Gaps** replace the data with blank spaces.
- **Redaction** replaces data with a solid black line.

Comply with  
**GDPR legislation**

**Multilingual  
Anonymization**

**Secure storage**  
in the cloud or a  
private installation

**Subscriptions** with  
prices tailored to  
customer needs

## PROTECT YOUR DATA, YOUR CLIENTS' PRIVACY AND YOUR CORPORATE REPUTATION

**1** Maintain privacy protocols for sharing, storing or monetizing data.

**2** Optimize content and data flow across work streams.

**3** Leverage standard solutions built for EU public administrations across languages.

**4** AI engines can be trained, optimized and cloned for unique domains.

**5** Advanced features enable configurability and aggressive optimization training.
